

KOFFI KOFFI AMBROISE

AI Engineer, Python and Machine Learning. Native French speaker.

Phone / WhatsApp +225 05 44 80 17 44 **Email** ambroise.kf@gmail.com **Location** Abidjan, Côte d'Ivoire
LinkedIn linkedin.com/in/ambroisekoffi **GitHub** github.com/sabio27 **Portfolio** infosab.vercel.app

AI engineer with a Master's in Artificial Intelligence. I work mostly in Python and have trained and evaluated models in computer vision, NLP and classic machine learning. **French is my native language.** I'm looking for work writing and reviewing Python code, rating model answers on ML and data science, and French-language tasks.

SKILLS

Programming: Python (pandas, NumPy, scikit-learn, PyTorch), SQL, R, Git/GitHub.

Machine Learning: classification, regression, clustering, imbalanced data, ensembling (LightGBM, XGBoost).

Deep Learning & NLP: CNNs, YOLO, autoencoders, text classification with spaCy, OpenCV, TensorFlow.

Model evaluation: clean train/validation/test splits, metrics for imbalanced classes, error analysis.

Languages: French (native, professional writing), English (intermediate, B1).

PROFESSIONAL EXPERIENCE

AI Engineer Intern in Computer Vision, Lynk

Apr.–Sept. 2026

Agritech, Abidjan

- Built on my own a deep learning system that recognizes cocoa tree diseases from photos, from the raw images to the deployed model.
- Added a module that estimates the infection risk and how much production could be lost.

ACADEMIC PROJECTS

ESA-Ariel 2025 AI Challenge, 3rd place nationally (*Machine Learning*)

Python, LightGBM, scikit-learn

Classifying noisy exoplanet atmospheric spectra. Feature engineering and ensembling brought the score to 0.974.

Eye disease classification from fundus images (*Computer Vision*)

PyTorch, YOLOv8, YOLO11, OpenCV

Group project. 10 classes, some with fewer than 20 images; fine-tuned YOLO models reach 77.5% on the test set.

Real-time fraud detection with parallel agents (*Multi-agent systems*)

Python, multiprocessing, Streamlit, SQLite

A simulation where fraudsters learn (Q-learning) to dodge detectors running in parallel. The detectors still caught 98.4% of attempts.

Sentiment analysis of fast-food tweets (*NLP*)

spaCy, scikit-learn, Flask, Gradio

137,000 tweets about KFC, McDonald's and Burger King. Logistic regression on TF-IDF (91.5% on test), served through a Flask API.

Airline passenger satisfaction scoring (*Scoring*)

Python, statsmodels, scikit-learn

104,000 passengers. A logistic regression to see what drives satisfaction, a random forest to predict it (96.1%).

EDUCATION

Master's Degree (M2) in Artificial Intelligence

2025–2026

Félix Houphouët-Boigny University & Rennes 2 University, Abidjan

Deep Learning, NLP, high-performance computing, NoSQL, IoT.

Master's Degree, first year (M1), Data Science and AI

2024–2025

Félix Houphouët-Boigny University & Rennes 2 University, Abidjan

Statistical learning, time series, econometrics, data mining.

Bachelor's Degree (Licence) in Mathematics and Applications

Félix Houphouët-Boigny University, Abidjan

CERTIFICATIONS

Junior Cybersecurity Analyst, Cisco, Dec. 2025

[certificate]

Professional Network Technician, Cisco, Dec. 2025

[certificate]
