

KOFFI KOFFI AMBROISE

AI & Data Science Engineer — Machine Learning, Deep Learning, NLP, Computer Vision

Phone / WhatsApp +225 05 44 80 17 44 **Email** ambroise.kf@gmail.com **Location** Abidjan, Côte d'Ivoire
LinkedIn linkedin.com/in/ambroisekoffi **GitHub** github.com/sabio27 **Portfolio** infosab.vercel.app

Master's graduate in Artificial Intelligence. I recently spent six months at **Lynk** independently building a cocoa disease detection system, from raw data to production. My projects cover medical imaging, NLP, scoring and fraud detection, from data preparation to working applications. I am looking for a position or internship in AI, Data or Machine Learning, in Abidjan or remote, working on solutions with real impact in the field.

SKILLS

Machine Learning: supervised and unsupervised learning, scoring, ensembling — scikit-learn, LightGBM.

Deep Learning & Vision: CNNs, object detection (YOLO), autoencoders — PyTorch, TensorFlow, OpenCV.

NLP: text preprocessing, classification, sentiment analysis, Transformers — spaCy.

Time Series: ARIMA, LSTM, forecasting — statsmodels.

Data: Python, R, SQL, NoSQL, pandas, NumPy, Spark, Power BI, Tableau.

Deployment: FastAPI, Docker, MLflow, Git/GitHub, GitHub Actions.

PROFESSIONAL EXPERIENCE

AI Engineer Intern — Computer Vision — Lynk

Apr. 2026 — Sept. 2026

Abidjan, Côte d'Ivoire — Agritech

- Designed and implemented a deep learning system that detects cocoa tree diseases from images.
- Built a module for infection risk assessment and production loss estimation.
- Owned the full lifecycle: data, model training and evaluation, pipeline and deployment.

ACADEMIC PROJECTS

ESA-Ariel 2025 AI Challenge — 3rd place nationally — Machine Learning

Python, LightGBM, scikit-learn

Classification of noisy exoplanet atmospheric spectra; score of 0.974 (feature engineering, ensembling).

Eye disease classification from fundus images — Computer Vision

PyTorch, YOLOv8, YOLO11, OpenCV

10 classes, 5,335 imbalanced retinal images; augmentation of rare classes, fine-tuned YOLO models (77.5% test accuracy).

Real-time fraud detection with parallel agents — Multi-agent systems

Python, multiprocessing, Streamlit, SQLite

Adaptive fraudsters (Q-learning) against parallel detectors: 98.4% of frauds caught, 4.3× speedup on 6 cores.

Sentiment analysis of fast-food tweets — NLP

spaCy, scikit-learn, Flask, Gradio

137,000 tweets on three chains; TF-IDF and logistic regression, 91.5% test accuracy; REST API and web interface.

Airline passenger satisfaction scoring — Scoring

Python, statsmodels, scikit-learn

104,000 passengers; logistic regression to explain satisfaction, random forest to predict it (96.1% accuracy, AUC 0.993).

EDUCATION

Master's Degree (M2) — Artificial Intelligence

2025–2026

Félix Houphouët-Boigny University & Rennes 2 University — Abidjan

Deep Learning, NLP, high-performance computing, NoSQL, IoT.

Master's Degree, first year (M1) — Data Science / Artificial Intelligence

2024–2025

Félix Houphouët-Boigny University & Rennes 2 University — Abidjan

Statistical learning, time series, econometrics, data mining.

CERTIFICATIONS

Junior Cybersecurity Analyst — Cisco, Dec. 2025

[certificate]

Professional Network Technician — Cisco, Dec. 2025

[certificate]

Languages: French (native), English (intermediate, B1)
